

STÖLZLE GLASS GROUP

# COSMETICS

STANDARD COLLECTION

# YOUR PRESTIGE GLASS PARTNER

Four of the six European Glassworks within Stölzle Glass Group are dedicated to the production of glass containers which make you feel at ease in your home. When it comes to cosmetics, Stölzle offers a huge variety of containers – e.g. miniatures, jars and bath care containers – which might somehow be used in a creative way to pack your precious cosmetics. Think about nail polish bottles which might suit perfectly to dress fancy mini perfumes. Whereas our jars and bath care containers would ideally be filled with an uncounted number of SPA products like fluids, creams, soaps, lotions, bath pearls, peelings or powder. Be creative!

An exclusive touch of luxury can be added to all kinds of glass containers by state-of-the-art decoration, which is available in three in-house decoration facilities.

- ✓ All products are available including compatible caps & closures
- ✓ High quality extra white flint glass
- ✓ Feeder coloration with unlimited shades
- ✓ Standard containers available from stock upon short notice

# DECORATION

In recent years decoration has become increasingly important. To make the glass bottles and containers stand out from the mass of products available on the market, more and more customers are turning to sophisticated decoration techniques and commissioning exclusive ranges at the top end of the market. Stölzle intends to keep pace with this trend: For some time now Stölzle has been investing in state-of-the-art decoration techniques at its facilities in Poland, France and Great Britain.

In addition to familiar decoration processes like screen printing, the Glass Group strives to set steps in terms of innovative decoration in order to offer its customers a wealth of opportunities to implement their wishes and to substantially increase the added value of all products.

## SCREEN PRINTING

We are able to offer silk screen printing with up to eight colours, applying either organic or ceramic inks, as well as UV curing inks. We take advantage of several state-of-the-art fully automatic screen printing machines, where multi-colour decoration can be executed in a single process. In addition we can offer more flexible solutions by using semi-automatic machines to decorate smaller customized volumes.

UV technology enables us to offer a broad range of colours and reduces the time to market for new product developments.

## HOT-FOIL STAMPING

Hot-foil stamping will provide a final touch of luxury to outstanding products, be it flat, round, cylindrical or slightly conical containers. Our modern, innovative machines enable us to provide an utmost competitive high-end quality finish to your product. The foils are available in a broad range of impressive colours.

## FROSTING

This process is done to gain matt finishes. Glass containers of unlimited shapes and sizes are immersed in a fully automatic process into bathes which leads to a satin effect of the bottles' surface. This finish provides a beautiful luxurious satin effect which suits ideally for additional decoration like silk screen printing or hot-foil stamping.

## DIGITAL PRINTING

Decoration as such has gained variety throughout the Digital Age. Digital printers enable us to transfer unlimited, photorealistic artworks to a huge variety of bottle shapes and sizes, without further tempering. This technique suits perfectly to decorate small customized lots and limited editions.

## SPRAYING

Our spraying machines enable us to coat bottles of all shapes and sizes with up to three colours at the same time. We can apply a huge variety of innovative spray substances in order to achieve stunning effects and textures: translucent, opaque, vignette, satin, metallic, matt or frosted effect. Spraying can perfectly be executed leaving parts of the product un-decorated, what means partially not sprayed, in order to apply additional decoration techniques in a further step. Alternatively it's very trendy to remove selected areas of the coating – especially when it comes to metallic spray – in order to achieve fancy “windows” or patterns on the bottles.

## PAD PRINTING

Pad printing is used to decorate items which may not suit to be decorated by conventional screen printing machines, due to their shape. Via pads we are able to apply a huge variety of designs even to very eccentric surfaces.

## IPET

This coating process, which – worldwide – is uniquely offered by Stölzle, enhances the brilliance and the wonderful colour of our glass. IPET treatment is the perfect basis for further decoration like silk screen printing or hot-foil stamping.

## ACCESSORY APPLICATION

It's getting constantly more popular for renowned brands to gain individuality by applying accessories to their products in a second decoration step. Applications include badges, logos, collars, plates or base stands, most often made of utmost high-quality materials like metal or leather in order to create a luxurious and fancy look.
